

FRONT RUNNERS

Double in situ hybridisation on a presomitic-stage mouse embryo showing the expression domains of *Hesx1* (red) and *Pax2* (purple). See research article by Sajedi et al. on page 241.

DMM PODCAST

dmm.biologists.org

183 IN THIS ISSUE

RESEARCH HIGHLIGHTS

- 184 Immunity and infection: a smart way to fight infection**
HIV: protein binding elicits antibody response
Stem cells: a niche in the sea
Development: kinase crucial for cardiac development
Cancer: a new look at SIRT1 in tumor suppression and DNA repair
Cystic fibrosis: transgenic pigs mimic human symptoms

EDITORIALS

- 187 Where credit is due**
 Vivian Siegel
- 192 Meetings of the minds: maximizing drug discovery**
 Jeanne Magram

COMMUNITY NEWS

- 195 A new generation of superb models | NIH Transformative R01 grant deadline approaches | Allan Spradling wins 2008 Gruber Genetics Prize | MacArthur Foundation Fellowships**

A MODEL FOR LIFE

- 197 The first transgenic mice: an interview with Mario Capecchi**
 Kristin Kain

FEATURE

- 202 Promoting translational research at Vanderbilt University's CTSA institute**
 Kristin Kain

PRIMER

- 205 Studying host-pathogen interactions and innate immunity in *Caenorhabditis elegans***
 Dennis Kim

SPECIAL ARTICLE: FUNDING SERIES

- 209 Research on animal model organisms funded by the European Commission's framework programmes**
 Christian Desaintes

COMMENTARY

- 213 Mouse models of allergic asthma: acute and chronic allergen challenge**
 Anthony T. Nials and Sorif Uddin

PERSPECTIVE

- 221 Zebrafish myelination: a transparent model for remyelination?**
 Clare E. Buckley, Paul Goldsmith and Robin J. M. Franklin

ORIGINAL RESEARCH

RESEARCH ARTICLES

- 229 Peptidylarginine deiminase 2 (PAD2) overexpression in transgenic mice leads to myelin loss in the central nervous system**
Abdiwahab A. Musse, Zhen Li, Cameron A. Ackerley, Dorothee Bienzle, Helena Lei, Roberto Poma, George Harauz, Mario A. Moscarello and Fabrizio G. Mastronardi
- 241 Analysis of mouse models carrying the I26T and R160C substitutions in the transcriptional repressor HESX1 as models for septo-optic dysplasia and hypopituitarism**
Ezat Sajedi, Carles Gaston-Massuet, Massimo Signore, Cynthia L. Andoniadou, Daniel Kelberman, Sandra Castro, Heather C. Etchevers, Dianne Gerrelli, Mehul T. Dattani and Juan Pedro Martinez-Barbera
- 255 Adaptive genetic variation, stress and glucose regulation**
Roxanne C. Oriel, Christopher D. Wiley, Michael J. Dewey and Paul B. Vrana
- 264 Epithelial-to-mesenchymal transition of peritoneal mesothelial cells is regulated by an ERK/NF- κ B/Snail1 pathway**
Raffaele Strippoli, Ignacio Benedicto, Maria Luisa Pérez Lozano, Ana Cerezo, Manuel López-Cabrera and Miguel A. del Pozo

RESEARCH REPORT

- 275 Combinatorial interaction between CCM pathway genes precipitates hemorrhagic stroke**
Aniket V. Gore, Maria Grazia Lampugnani, Louis Dye, Elisabetta Dejana and Brant M. Weinstein
