

Cover: Primary cortical neuronal culture isolated from newborn Tg2576 mice, expressing the human amyloid precursor protein (APP, isoform 695) carrying the Swedish mutation (APP^{swe}; KM670/671NL). Cells were allowed to mature *in vitro* for 8 days and then characterized for culture composition by immunocytochemistry for neural (β -III-tubulin; green) and astroglial (GFAP; red) markers. See article by Baldassarro et al. on page 671. Cover image by Vito Antonio Baldassarro is licensed under a Creative Commons Attribution 4.0 International licence.
