

Fig. S1. GFP expression in additional organs.

Additional organs to Fig. 1. GFP expression in lung, pancreas, adrenal gland and salivary gland. Scale bar = 2mm.

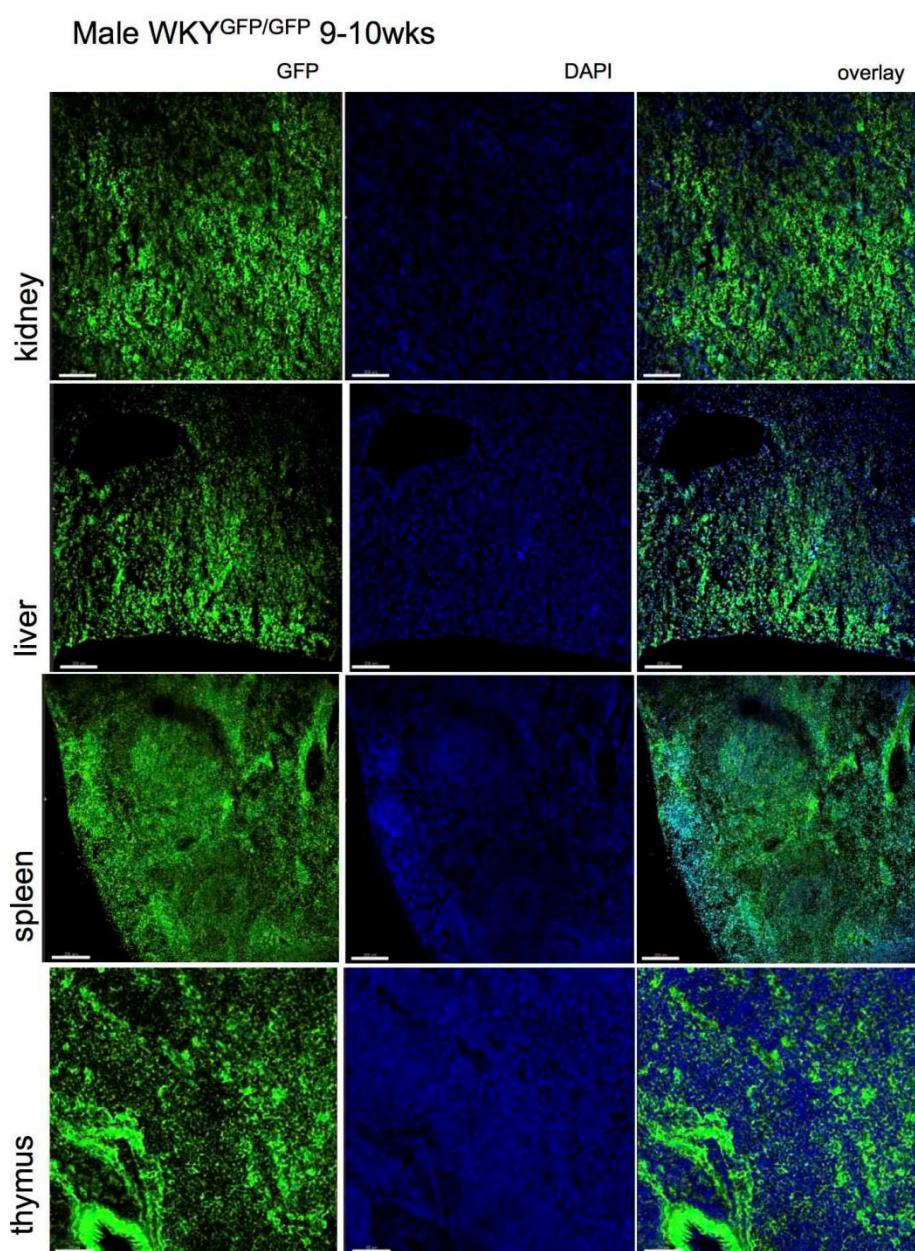

Fig. S2. GFP expression in tissues after histological processing. Organs were collected from Male WKY-GFP rats and processed for frozen sectioning. 2 μ m sections were counterstained with DAPI and GFP expression analysed using fluorescent imaging. Representative of at least n=3 rats. Scale bar = 20 μ m.
